

Preferred Drug List

This drug list is a guide within select therapeutic categories for plan participants and healthcare providers. **Generics should be considered the first line of prescribing.** If there is no generic available, there may be more than one brand-name medicine to treat a condition. These preferred brand-name medicines are listed to help identify products that are clinically appropriate and cost-effective. Generics listed in therapeutic categories are for representational purposes only. This is not an all-inclusive list. This list represents brand products in Proper Case and generic products in lower-case italics.

Plan Participant

Your benefit plan provides you with a prescription benefit program. Ask your doctor to consider prescribing, when medically appropriate, a preferred medicine from this list. Take this list along when you or a covered family member sees a doctor. **Please note:**

- Your specific prescription benefit plan design may not cover certain categories, regardless of their appearance in this document.
- Unless specifically indicated, drug list products will include all dosage forms.

Healthcare Provider

Your patient is covered under a prescription benefit plan. As a way to help manage health care costs, authorize generic substitution whenever possible. If you believe a brand-name product is necessary, consider prescribing a brand name on this list. **Please note:**

- Generics should be considered the first line of prescribing.
- This drug list represents a summary of prescription coverage. It is not inclusive and does not guarantee coverage.
- The plan participant's specific prescription benefit plan may have a different copay for specific products on the list.
- Unless specifically indicated, drug list products will include all dosage forms.

When a number or symbol follows a category name, more information is available for the category.

§ Generics are available in this class and should be considered the first line of prescribing.

¹ **Therapeutic Management Program** provides members with educational material and other information to encourage better health through appropriate utilization of these products. Depending on benefit design, these products may be available for the generic co-pay.

² **Step Therapy:** Branded agents not listed may be subject to step edits, which require trial of a preferred agent before a non-preferred agent will be covered.
