

“What’s Your Number?”

Breast Cancer Screening

October and Breast Cancer Awareness Month, the time when many get their mammograms, has come and gone. Kudos to you if you scheduled your mammogram. If not, what was the reason - too busy, unnecessary, haven't gotten around to it?

Whatever the reason, take an hour and let radiologist Kelly Powers, M.D., educate you on this very common cancer. Don't be the 1 in 8 women who will develop invasive breast cancer in her lifetime. On average a woman is diagnosed with breast cancer every 2 minutes, and 1 woman will die of this cancer every 13 minutes. Most women who are diagnosed with breast cancer have no known risk factors or history of the disease in their families.

Although breast cancer screening cannot prevent breast cancer, it can help find the disease early when it is easier to treat. Join us as Dr. Powers discusses lifestyle modifications, which breast cancer screening tests are right for you, and when to have them done.
