LIFESAVING & HEALING ORGANS & TISSUES

The importance of organ donation

More than 120,000 men, women and children in the United States are in desperate need of a lifesaving organ transplant. Despite the advances made in both technology and medicine, the need for organs and tissue continues to grow. Donation gives hope to thousands of people with organ failure and renews the quality of life for thousands of others.

Life Alaska Donor Services staff has the expertise to ensure that Alaska's donors and their families are able to maximize their donation wishes. Organs which can be recovered for lifesaving transplants include the heart, liver, pancreas, lungs, kidneys and intestines. Examples of tissues that could enhance or save someone's life include corneas, cardiovascular tissues, bones and skin grafts.

Donna Brahaney, CTBS

Join us as Donna Brahaney, Professional & Public Education Coordinator for Life Alaska Donor Services, explains the organization's mission, uses of the organs and tissues recovered for transplant, how to become a donor, the donor support program, and much more!
